Choosing Correct Needle Size

Choosing the correct needle size for your project can make a world of difference in the finished product.

But how do you know what size is best ??

A needles size is determined by its thickness or Needle Gauge. The U.S. needle sizing system ranges from 6 to 28, with the higher numbers representing thicker needles and lower numbers indicating thinner needles.

For Lighter Fabrics, choose a Thinner Needle which will help eliminate skipped stitches & fabric damage. For Heavier Fabrics use a thicker needle which will help avoid Needle and/or Thread Breaking.

It is recommended to change your needle after every project or every 5-6 hours of sewing as they do get dull points while sewing.

New Section

Almost every week one of my many customers will ask if I know anyone who wants to buy a machine they no longer want or need.

This section will be reserved for those machines

Send me a text or email with brief specifics about the machine – Brand – Model # – But not price

I will post it on here in the next edition and then put Buyer & Seller together for you to work out price & details.
